01 DEVELOPMENT

Websites that look good. Web apps that actually work.

We build fast, responsive and maintainable digital products, with security considered from the first commit rather than bolted on before launch.

Static / business website

7-12 DAYS

Mobile-responsive website with WhatsApp and call buttons, enquiry form, Google Maps, Google Business setup, SSL and basic on-page SEO.

PLAN A

₹20,000 setup

+ ₹1,500 / month

PLAN B

₹30,000 one-time

No monthly commitment

Custom web app - low complexity

3-4 WEEKS

Logins, dashboards, database-backed forms, admin panel, basic reporting and integrations such as payment links or email.

PLAN A

₹35,000 setup

+ ₹2,500 / month

PLAN B

₹40,000 one-time

No monthly commitment

Custom web app - high complexity

5-8 WEEKS • PHASED

Multi-role systems, custom workflows, e-commerce and booking, payment gateways, inventory, APIs and business integrations.

PLAN A

₹85,000 setup

+ ₹5,000 / month

PLAN B

₹1,00,000 one-time

No monthly commitment

PLAN A

Lower setup cost, then a monthly AMC.

PLAN B

One-time ownership, no monthly commitment.

AMC includes hosting and domain handling, security and framework updates, daily backups, uptime monitoring, small content changes, bug fixes, priority support and one annual security check.

02 SECURITY

VAPT that goes beyond a scanner report.

We test web applications, APIs and external infrastructure manually, verify every finding by hand and show how it can actually be exploited.

STARTING AT

₹25,000 – ₹40,000

One web application + a small external footprint.

What we test

- ✓ OWASP Top 10
- ✓ Authentication & sessions
- ✓ Access control & privilege escalation
- ✓ Business logic flaws
- ✓ REST / GraphQL APIs
- ✓ Rate-limit & abuse cases
- ✓ External network exposure
- ✓ Configuration weaknesses

What you get

- ✓ Manual verification
- ✓ Reproduction steps and PoC
- ✓ Business impact
- ✓ Executive summary
- ✓ Technical developer report
- ✓ One free retest
- ✓ Fixed scope & timeline

Larger infrastructure. Multiple applications, internal networks, cloud, Active Directory or compliance-mapped reporting are quoted after a short scoping call.

Ongoing security. Regular testing for teams that ship frequently, at a lower per-test rate.

BUILD + SECURITY

One team.
One accountability.

Build your product and have the same team test it. The people who wrote the code understand the findings, so nothing is lost in the handover between a developer and an auditor. Ask for a combined project quote.

03 WHY XECBUILD

Built by developers. Tested like attackers.

Security is not an add-on for us. It is part of how we approach the product.

01

One team. One accountability.

No developer-versus-auditor blame game. The people building understand the findings.

02

Manual + AI-assisted testing.

Automation covers surface area. Human testing targets logic, authorization and real attack paths.

03

Reports developers can use.

Clear reproduction steps, impact and remediation, not a pile of scanner output.

04

You own everything.

Source code, hosting and documentation are handed over. No lock-in.

05

Ready after launch.

Support, fixes and retests when your product changes.

06

Fixed pricing after scope.

We scope first, then give you a fixed price. No surprise costs at the end.

LET'S TALK

Have a project? Have an attack surface?

Jump on a 20-minute call. Tell us what you need and what is in scope, and we will come back with a fixed, itemised quote.
